SUMMARY

Results-driven Software Engineering Student and Backend AI Engineering Intern. Focused on building modern, scalable server-side systems using Node.js, Express, and JavaScript. Combining strong engineering principles with an AI Fluency track to implement secure REST APIs, structured databases, and intelligent cognitive integrations

EXPERIENCE

Backend AI Engineering Intern 06/2026 - Present

FlyRank AI

- Parallely completing two structured learning and development tracks: Backend AI Engineering and AI Fluency
- Extending development focus in Node.js, Express.js, and JavaScript (ES6+) to build asynchronous server-side logic
- Designing and integrating structured, RESTful APIs, incorporating secure Authentication (Auth)
- Managing database workflows using SQL to efficiently handle data storage, optimize structure, and query backend data

EDUCATION

Software Engineer 10/2023 - Present

University of Zenica

- Core Focus: Software Engineering, Data Structures, System Architecture

SKILLS

JavaScript · Node.js · C# ·

SQL, PostgreSQL · Json, Rest API ·

Git · Express.js · AI Fluency ·

System Architecture

PROJECTS

Polite Web Scraper

08/2026 - 08/2026

Backend

- Developed an automated backend data extraction tool using Node.js
- Implemented strict rate-limiting and robust proxy rotation to build an ethical, "polite" web crawler that respects target server guidelines

Secure Auth & CRUD API

07/2026 - 08/2026

Backend, API Design

- Designed and implemented a robust RESTful CRUD API utilizing Express.js
- Integrated secure User Authentication and Authorization (Auth) workflows
- Managed relational data storage by connecting a PostgreSQL database
- Containerized the entire application environment using Docker
- Documented all API endpoints interactively using Swagger UI
